Climate Change: A Crucial Environmental Issue Facing Modern Society

Dr. Berrian Moore III

Executive Director, Senior Research Scientist

Climate Central

18 November, 2009 -- 7:00 PM
Science Building, Room 125
Western Connecticut State University

Climate change is real and due primarily to fossil fuel use. Significant changes in the global heat balance are underway in ways that are yet not well understood. The issues are complex and compelling: What do we know? What do we think we know? What do we not know? What should we do or not do? Dr. Moore will speak to the complexity and importance of climate change.

Dr. Moore is a leader in the field of climate change. He is the Executive Founding Director of *Climate Central*. He shared in the **2007 Nobel Peace Prize** awarded to the Intergovernmental Panel on Climate Change, and has authored over 150 papers on the carbon cycle and numerous policy documents in the area of the global environment.

A reception with refreshments will follow the presentation
